

Understanding emerging supply chain technologies is essential

Technologies allow for more transparent supply chains, help predict future events, provide specific recommendations based on available data, automate routine tasks, streamline operations, cut costs and shorten delivery times. Staying up-to-date with technology is crucial to:

- Understand how key technologies can streamline and improve operational performance.
- Evaluate benefits and risks of various supply chain technologies.
- Explain how blockchain can allow for more transparent supply chains, improve product traceability and enable smart contracts and NFTs.
- Identify the appropriate use cases for additive manufacturing and 3D printing in supply chain, as well as the in-house vs. outsourcing considerations.
- Understand the latest governance in cybersecurity, anti-hacking technology, and access controls to manage, assess, mitigate and monitor networks.
- Explain the infrastructure of Internet of Things and how digital twins can help companies make data-driven decisions.
- Understand how predictive & prescriptive analytics can be used and the role of AI and robotics in automating routine tasks.

Learn from our Supply Chain Expert Team!

Combine the certificate E-Learning selfstudy (20 hrs) with 8 expert webinars over 8 weeks, 1.5 hrs each. During these sessions, industry experts provide insights and their best practices about the key topics of the ASCM technology certificate:

- 1// Kick-off & Introduction
- 2// Blockchain
- 3// Advanced Analytics and Automation
- 4// Internet of Things
- 5// Cybersecurity
- 6// Demand Planning Technologies
- 7// Additive Manufacturing
- 8// Wrap-up & Exam Preparation

Next webinars:

- 21.2.2025 - 11.4.2025
- 31.10.2025 - 19.12.2025

ASCM certificate E-Learning +
Webinar Series: € 1599,- (plus VAT)
